# UltraShape

is a groundbreaking non-invasive treatment that discreetly frees your body of unsightly fat

UltraShape has developed the first, safe, surgery-free body contouring treatment based on scientifically proven, non-invasive ultrasound technology.

## A simple walk-in, walk-out procedure

UltraShape is designed for both average and overweight men.

The treatment conducted in your physician's office, can last between one hour and 1.5 hours. Afterward, no recovery time is required ... you simply pick up your life where you left off.

## Measurable results

A single UltraShape treatment and you'll notice the change in as little as a month: **an average reduction of 2 cm in your body circumference!** What's more, you'll need no maintenance treatment.

## Safe and simple

The *Contour I* system, designed by UltraShape, breaks down fat cells by using a non-invasive

ultrasound beam. It selectively targets fat cells in a specific region of your body (abdomen, flanks) and disrupts them without affecting surrounding tissues. No anesthesia is required at any stage. In clinical trials worldwide, patients report that UltraShape treatment is painless and that side-effects are extremely rare.

## What happens during treatment?

Your physician first marks the treatment area. Then you simply relax on the comfortable *Contour I* treatment bed while a hand-held device delivering ultrasound beams, gently glides over the marked zone. The innovative *Contour I* tracking device acts as a guide to ensure accurate treatment and homogenous results.

## What happens to the fat cells?

The *Contour I* system uses focused ultrasound technology to break down fat cells. It disrupts the membranes of fat cells, dispersing cell content (triglycerides) into the intercellular fluid, which is then transported through the vascular and lymphatic systems to the liver. The liver makes no distinction between fat originating from UltraShape treatment, and fat resulting from consumed food- both are processed by the body's natural mechanisms.
